

ROGER CPA EXAM REVIEW USB DRIVE: HOW IT WORKS

EASY TO USE

The Roger CPA Review USB Drive Course is very simple to use. Almost all computers manufactured since 1999 have at least one USB port. Today, most computers have at least two. To use our course, you simply plug the drive into your USB slot, wait a few seconds, then navigate to the Setup.exe file on the drive. Installation takes about two or three minutes, then you are ready to go!

WHAT YOU NEED

All you need is a Mac running OS X or greater, PC running Windows 2000 (any version), XP (any version), or Vista with an available USB port and you are good to go! Here are the technical system requirements:

- Pentium® II-class or equivalent processor or higher
- Microsoft® Windows® 2000 Professional / XP Home / XP Professional / Vista **OR** Mac OS X or higher
- USB 2.0 host connection or controller for USB 2.0 speeds*
- 32MB RAM or more as required by operating system

*If you have only one USB 1.1 port on your computer, you may need to purchase a supplemental power supply (\$19.95) from Roger CPA Review. Otherwise, no external power supply is necessary. In most cases, the course will work with any USB-enabled computer less than 8 years old.

Windows Vista users: Some users may experience an error when installing the USB drive using Windows Vista, depending on individual security settings. When entering the serial number, a message may appear requesting administrator privileges to complete the installation. To complete the installation, right click on the USB Course Desktop Icon and click "Run as Administrator." Then click "Allow". Your course installation will then finish normally.
